About Empire Construction -

Established in 2009, Empire Construction is proud to be a CERTIFIED WBE and DBE firm, based out of Middletown, NJ. With deep roots in the construction industry, Empire Construction strives to safely exceed expectations, while providing the highest quality workmanship. Empire Construction performs marine and civil construction services throughout the Northeast, specializing in marine related projects, specifically marine construction, marine demolition and associated ancillary services.

Empire Construction has successfully completed projects in the metropolitan area ranging from small bulkhead installs to multi-million dollar magnitude concrete restoration and repairs on the JFK bridge. Our clients include agencies such as U.S. Fish and Wildlife, USACE, PANYNJ, MTA TBTA, local townships, and commercial properties.

Featured Project -

Empire Construction was awarded a contract by MTA Bridges & Tunnels for the complete fit out of an Engineers Office located at Verrazzano Narrows Bridge Plaza in Staten Island, NY. The original space was an unfinished concrete shell. The project involved a complete interior fit out of the space to include plumbing, electrical, mechanical, carpentry, interior glazing, and finishes to create a new Engineer's suite for the bridge resident engineer team. The space included private offices, conference room, restroom, kitchenette, and a large open area for modular office spaces.

This project is scheduled to be completed in October 2019, 4 months ahead of schedule.

EMPIRE CONSTRUCTION

Recently Completed Projects -

Subway Street Stair Repairs– Manhattan, New York

Empire Construction was contracted by the MTA to complete its 2nd subway stair repair project. Work completed in the overhaul of the 14th Street Subway Station entrance included demolition of existing wall & ceiling tiles, drainage structures, stair treads, concrete topping slabs, concrete sidewalk and curb, K-Rail and handrails, and crumbling CMU wall.

Photo to the left: 14th Street Subway entrance prior to demolition.

Photo to the right: 14th Street Subway entrance after work was complete.

Once demolition was complete, Empire began the process of rebuilding the staircase by installing and setting of CMU blocks, reconstruction of the stairs, installation and setting of tiles on the wall and stair surfaces. Drainage structures were replaced, and the topping slabs, sidewalk and curb were poured. Fabrication and installation of the handrails were fabricated by Empire's newly acquired ornamental iron division and finally, the K-Rails were installed. Painting was completed to match existing conditions.

The stairway was re-opened to the public on-time and with zero safety incidents.

PATH Substation 7 Sheeting and Pile Driving – Jersey City, New Jersey

Empire Construction was contracted by Mass. Electric Construction Co. for the installation of steel sheeting and steel pipe piling, in support of the construction a new two-story building, on land that is several feet higher than FEMA flood elevation standards. Work was completed without any interruption to PATH train service and facility operations.

For our portion of the work, Empire Construction installed approximately 552 LF of PZ-27 sheeting and 115 steel pipe piles varying in size from 60 ft - 65 ft long. Equipment used includes a 110-ton crane, ABI 13/16, Junttan PM25, vibratory hammer, pile driver with telescopic leader and a hydraulic vibratory hammer.
